

# Meesho Daily Drill Sheet

Product Based / Meesho

## Study Hub Premium Placement Pack

This is original study material for preparation. It is not a copied official or proprietary company paper.

## Premium Study System

- Track: Meesho.
- Pack type: PRACTICE / Daily Practice.
- Target outcome: selection-ready confidence for SDE / Software Engineer.
- Core preparation areas: DSA, CS fundamentals, OOP/LLD, HLD basics, behavioral stories, resume projects.
- Use this pack like a mini-book: concept, table, example, practice, analysis, revision.
- Every topic should produce proof: solved questions, mock score, mistake note, interview answer, or resume evidence.

## Output Quality Rules

- Read the concept in your own words, then solve without looking at notes.
- Convert every important idea into a comparison table, checklist, or one-line rule.
- Mark important traps as Common Mistake before the mock, not after losing marks.
- Keep a PYQ-style log: question pattern, topic, time taken, mistake reason, retest date.
- Use simple English; add Hindi/Hinglish meaning in brackets when it helps recall.

## Priority Matrix

| Area | Premium Standard | Proof Before Moving On |  
| DSA | Pattern, invariant, dry run, complexity | 2 solved problems per pattern without hints |  
| CS Core | OS, DBMS, CN, OOP with examples | Explain each topic in 60 seconds |  
| Project | Problem, architecture, your contribution, tradeoff | 2-minute story plus deep-dive answers |  
| Communication | Crisp intro, structured HR stories, calm tone | 5 recorded answers reviewed once |

## Exam Tip

- Interviewers reward clean reasoning more than memorized code. Say brute force, improve it, dry run, then discuss complexity.

## Common Mistake

- Jumping into code without constraints creates wrong edge cases. Ask size, duplicates, sorted/unordered, and expected output first.

## Daily Drill Sheet

- 20 minutes: formula or DSA pattern revision.
- 60 minutes: two DSA problems from different patterns.
- 25 minutes: CS fundamentals or SQL.
- 20 minutes: project explanation or HR story practice.
- 15 minutes: update mistake tracker.

## Weekly Review

- Pick top 5 mistakes.
- Re-solve them without notes.
- Convert each mistake into a rule.

- Attempt one full mock under timer.

## **PYQ-Style Attempt Protocol**

- Step 1: identify topic and difficulty before solving.
- Step 2: write the first approach, even if it is brute force or long method.
- Step 3: optimize only after the basic idea is correct.
- Step 4: dry run one normal case and one edge case.
- Step 5: add answer, time, mistake type, and retest date to the log.

## **Pattern References**

- Common OA patterns: hash map lookup, interval sorting, BFS/DFS, binary search on answer, DP state transition, stack/queue simulation.

## **Answer Review Table**

| Mark | Meaning | Next Action |  
| Solved | correct under timer | revise after 7 days |  
| Guessed | answer came without method | solve two similar questions |  
| Wrong | concept or execution gap | write mistake rule and reattempt tomorrow |  
| Skipped | time or confidence issue | learn shortcut or move to lower difficulty |

## **Execution Dashboard**

| Metric | Target | Review Frequency |  
| DSA Questions | 10-14 per week | every Sunday |  
| CS Core Notes | 4 topics per week | twice a week |  
| Mock Tests | 1-2 per week | same day analysis |  
| Interview Practice | 5 answers per week | record and review |

## **Weekly Review Ritual**

- Pick the top 5 mistakes, rewrite the correct rule, and solve one similar question.
- Remove one weak resume line or prepare one stronger project answer.
- Decide the next week from evidence, not mood.

## **Final Self Audit**

| Score | Meaning | Action |  
| 0-40 | reading stage | finish basics and easy questions |  
| 41-70 | practice stage | increase timed mocks and mistake review |  
| 71-85 | interview-ready | polish project, HR, and weak topics |  
| 86-100 | selection-ready | maintain revision and avoid overloading new material |
