

# Zoho Mock Test Pack

Product Based / Zoho

## Study Hub Premium Placement Pack

This is original study material for preparation. It is not a copied official or proprietary company paper.

## Premium Study System

- Track: Zoho.
- Pack type: PRACTICE / Mock Tests.
- Target outcome: selection-ready confidence for SDE / Software Engineer.
- Core preparation areas: DSA, CS fundamentals, OOP/LLD, HLD basics, behavioral stories, resume projects.
- Use this pack like a mini-book: concept, table, example, practice, analysis, revision.
- Every topic should produce proof: solved questions, mock score, mistake note, interview answer, or resume evidence.

## Output Quality Rules

- Read the concept in your own words, then solve without looking at notes.
- Convert every important idea into a comparison table, checklist, or one-line rule.
- Mark important traps as Common Mistake before the mock, not after losing marks.
- Keep a PYQ-style log: question pattern, topic, time taken, mistake reason, retest date.
- Use simple English; add Hindi/Hinglish meaning in brackets when it helps recall.

## Priority Matrix

| Area | Premium Standard | Proof Before Moving On |  
| DSA | Pattern, invariant, dry run, complexity | 2 solved problems per pattern without hints |  
| CS Core | OS, DBMS, CN, OOP with examples | Explain each topic in 60 seconds |  
| Project | Problem, architecture, your contribution, tradeoff | 2-minute story plus deep-dive answers |  
| Communication | Crisp intro, structured HR stories, calm tone | 5 recorded answers reviewed once |

## Exam Tip

- Interviewers reward clean reasoning more than memorized code. Say brute force, improve it, dry run, then discuss complexity.

## Common Mistake

- Jumping into code without constraints creates wrong edge cases. Ask size, duplicates, sorted/unordered, and expected output first.

## Mock Structure

- OA Mock: 2 coding questions, 75-90 minutes, one easy/medium and one medium/hard.
- Interview Mock: project explanation, one technical deep dive, one HR story.
- Review Rule: spend 2x mock duration on analysis.

## Scoring Sheet

- Accuracy, time taken, skipped topics, silly mistakes, weak concepts, revision date.

## PYQ-Style Attempt Protocol

- Step 1: identify topic and difficulty before solving.
- Step 2: write the first approach, even if it is brute force or long method.
- Step 3: optimize only after the basic idea is correct.

- Step 4: dry run one normal case and one edge case.
- Step 5: add answer, time, mistake type, and retest date to the log.

## Pattern References

- Common OA patterns: hash map lookup, interval sorting, BFS/DFS, binary search on answer, DP state transition, stack/queue simulation.

## Answer Review Table

| Mark | Meaning | Next Action |  
 | Solved | correct under timer | revise after 7 days |  
 | Guessed | answer came without method | solve two similar questions |  
 | Wrong | concept or execution gap | write mistake rule and reattempt tomorrow |  
 | Skipped | time or confidence issue | learn shortcut or move to lower difficulty |

## Execution Dashboard

| Metric | Target | Review Frequency |  
 | DSA Questions | 10-14 per week | every Sunday |  
 | CS Core Notes | 4 topics per week | twice a week |  
 | Mock Tests | 1-2 per week | same day analysis |  
 | Interview Practice | 5 answers per week | record and review |

## Weekly Review Ritual

- Pick the top 5 mistakes, rewrite the correct rule, and solve one similar question.
- Remove one weak resume line or prepare one stronger project answer.
- Decide the next week from evidence, not mood.

## Final Self Audit

| Score | Meaning | Action |  
 | 0-40 | reading stage | finish basics and easy questions |  
 | 41-70 | practice stage | increase timed mocks and mistake review |  
 | 71-85 | interview-ready | polish project, HR, and weak topics |  
 | 86-100 | selection-ready | maintain revision and avoid overloading new material |
